

Went Well	To Improve	Action Items	Went Wrong
Setting up all the formulas 👍👍👍👍	Site GUI 👍👍👍👍	A database better than this node version of sqlite3 to store site information 👍👍👍👍	session ID or user identification not set yet 👍👍👍👍
setting up a log for the calculator pages 👍👍👍👍	Testing for robustness 👍👍👍👍	Introducing cookies to the site to log users in a more robust way. 👍👍👍👍	Testing the database, test for the db were not included 👍👍👍👍
User account storing and registering 👍👍👍👍	Making the site a single page application 👍👍👍👍	not using get and post routers and solely relying on static express for single response page of the app. 👍👍👍👍	Not yet implemented or tested code with Jest 👍👍👍👍
Testing the formulas for accuracy 👍👍👍👍	Protecting user information by hashing passwords 👍👍👍👍	Making more sql tables to improve site, and store other site activities in them. 👍👍👍👍	Making time to turn the site into a single page application. 👍👍👍👍
Homepage GUI 👍👍👍👍	Not using redirect pages, anywhere in the site. 👍👍👍👍		Wasting time chasing Azure when the site is supposed to serve by local server 👍👍👍👍
Being able to Log the time of activities correctly 👍👍👍👍			Code security is not as strong as it could be. 👍👍👍👍

Sprint velocity :stories/ sprints, the is seven completed stories in this project and one sprint.
